

## **Bellandi Residence**

**Aurora, Illinois**

The Bellandi's asked BDS Design Group to help them create a Landscape for their front yard. They were concerned with an area in front of the garage that had some drainage problems. This area was constantly wet and washed silt over the driveway in a heavy storm. To help alleviate the rain runoff and beautify the area BDS designed a "Rain Garden". A Rain Garden is a shallow depressional area, beautified with native wild flowers and grasses. Rain Garden can be thought of as your own water quality system because it filters the runoff from roof and lawn and recharges the groundwater. This depressional area fills up with water a couple of inches and slowly filters into the ground rather than running off into storm drains.
